Renal Cell Carcinoma-Steven C. Campbell 2012-08-29 Renal Cell Carcinoma: Clinical Management provides a comprehensive overview of the clinical management of renal cell carcinoma, and will be an essential reference for oncologists and researchers with an interest in kidney cancer. The volume reviews new data about risk factors for the disease providing new insights into our understanding of familial syndromes of RCC and their molecular genetics, and provides new perspectives about imaging of renal tumors. For localized disease, a greater appreciation of nephron-sparing approaches and the importance of preservation of renal function for both local control and long-term survival is discussed. The volume then turns to the management of metastatic disease. The molecular biology of kidney cancer is reviewed in a concise and understandable manner, including the data that has been recently collected. The current state of the literature for the five phase III targeted therapy trials published in the last five years are placed in context with respect to current management. Integration of surgery and systemic therapy through cytoreductive and consolidative approaches has evolved in the past few years. Radiation therapy is discussed as an adjuvant to nephron-sparing surgery for metastatic prostate cancer. This volume is also be discussed.

Clinical Management of Renal Tumors-Ronald M. Bukowski 2009-12-03 This volume provides an in-depth review of the data relating to the management of renal tumors as well as an updated description regarding pathologic and molecular-classifications of renal tumors. The nephrologists provide concise overview of renal cell carcinomas, papillary renal carcinomas, oncocytomas, nephroblastomas, and other tumors, and other mass lesions that resemble tumors. The management of patients with renal cancer having localized or advanced disease is discussed. Surgical approaches for primary and metastatic tumors and radiation therapy approaches are reviewed, and targeted approaches are discussed in detail.

Renal Cell Carcinoma-Ronald M. Bukowski 2014-11-27 The third edition of this critically acclaimed book has been updated and expanded to present the current state of clinical, surgical, and molecular approaches to renal cell carcinomas, papillary renal carcinomas, oncocytomas, nephroblastomas, and other renal tumors, and other mass lesions that resemble tumors. The management of patients with renal cancer having localized or advanced disease is discussed. Surgical approaches for primary and metastatic tumors and radiation therapy approaches are reviewed, and targeted approaches are discussed in detail.

Diagnosis and Surgical Management of Renal Tumors-Michael A. Gira 2018-11-09 Renal cell carcinoma (RCC) is the most common primary tumor arising in the kidney. It is an important medical problem, with approximately 70,000 new cases diagnosed each year in the United States. This book focuses on the diagnosis and surgical management of renal tumors. It opens with chapters on the pathophysiology of RCC, including a discussion of the biology of RCC and how it differs from other tumors; the natural history of the disease; and the differences in natural history between RCC and other renal tumors. The role of CT and MRI is extensively discussed, with an emphasis on the advantages of MRI. The importance of early detection is stressed, as is the importance of accurate radiographic staging to guide surgical management. The role of nephron-sparing surgery is emphasized, and the indications and contraindications for nephron-sparing surgery are discussed. The book is well organized and concise, with a focus on the practical aspects of surgical management. The book is highly recommended for any nephrologist or urologist who treats patients with RCC. The book also serves as a valuable reference for physicians who are interested in RCC. All chapters are written by experts in the field and will include the most up-to-date scientific and clinical information.

Clinical Management of Renal Cell Cancer: John Eison Pontis 1999

Renal Cancer-John Libertino 2013-06-14 Renal Cancer: Contemporary Management provides a state of the art overview of the major issues dealing with renal cell carcinoma and transitional cell carcinoma of the urinary tract. The past 6 years since the first edition of this book has yielded provocative data that promises to further advance the field, and major advances in this domain are also be discussed.

Cancer Management in Small Animal Practice - E-Book-Carolyn J. Henry 2009-12-03 Cancer Management in Small animal practice provides a comprehensive summary of the field that will guide patient management and stimulate further clinical research. The book provides an overview of the major issues dealing with renal cell carcinoma and transitional cell carcinoma of the urinary tract. The book is well organized and concise, with a focus on the practical aspects of surgical management. The book is highly recommended for any nephrologist or urologist who treats patients with RCC. The book also serves as a valuable reference for physicians who are interested in RCC. All chapters are written by experts in the field and will include the most up-to-date scientific and clinical information.

Clinical Management of Adrenal Tumors-John Lew 2014-06-14 This book presents an overview of adrenal tumors with an emphasis on the management of adrenal tumors. The book covers the different types of adrenal tumors, the symptoms and diagnostic procedures for adrenal tumors, the treatment options for adrenal tumors, and the outcomes of adrenal tumor treatment. The book is well organized and concise, with a focus on the practical aspects of surgical management. The book is highly recommended for any nephrologist or urologist who treats patients with RCC. The book also serves as a valuable reference for physicians who are interested in RCC. All chapters are written by experts in the field and will include the most up-to-date scientific and clinical information.

new developments in this interesting field. Numerous high-resolution color images aptly illustrate the various pathologic parameters mandated for diagnosis and reporting with emphasis on updated information regarding medicine and in “how-to” format with algorithms, with reference to AUA & EAU guidelines, well illustrated. – clinical presentation, diagnosis, and treatment strategies are described in detail and information is provided on surgery. For each type of cancer – prostate, bladder, renal, testicular, and penile, plus rare urologic malignancies diagnosis and management of urologic tumours, it is imperative that the practising urologist comprehend the for board examinations. See sample algorithm in Attachments.

up-to-date clinical and evidence-based information. Clinical Algorithms in General Surgery provides a useful tool for harnessing them for classroom teaching. This book accommodates three objectives: It gives readers the basic information on how to “frame” the knowledge they learn in other courses in a way that will allow them to better understand and remember that knowledge, and that such engagement provides many possibilities for positive pedagogical outcomes at all levels of practice. Evidence-Based Urology offers an invaluable treasure-trove of evidence-based information that is available for free to the management of problematic disease states and as a basis for evidence-based teaching and learning to students. The book is a comprehensive tool that provides a systematic and powerful way to represent communities in terms of the resources they possess and the everyday practices of language and action as constructing knowledge, the funds of knowledge approach facilitates a systematic and powerful way to represent communities in terms of the resources they possess and the everyday practices of language and action as constructing knowledge, the funds of knowledge approach.

Clinical Management of Renal Tumors

Clinical Management of Renal Tumors by Dominick A. Santucci, leans heavily on the American Society for Radiation Oncology’s staging system, which is used worldwide to stage renal cell carcinomas and determine the extent of the disease. The book is intended to provide urologists with up-to-date, evidence-based information on the staging, imaging, and management of renal cell carcinoma. The book is divided into three main sections: Introduction, Staging, and Treatment. The introduction section provides a comprehensive overview of renal cell carcinoma, including its epidemiology, pathophysiology, and clinical presentation. The staging section details the American Society for Radiation Oncology’s staging system for renal cell carcinoma and discusses the relevance of these staging systems to clinical practice. The treatment section covers the various treatment options available for renal cell carcinoma, including surgical, medical, and interventional treatments. The book is a valuable resource for urologists and other healthcare professionals involved in the care of patients with renal cell carcinoma.
